

Logistic Risk Survey

In the recent time where the world become borderless and the goods transfer grow to be worldwide, the logistic activity (Good handling in the storage, loading-unloading, handling during transport, security, etc) become very importance value.

As generally the logistic survey is more "loss control" than "loss prevention" thus the main goal is to reduce as minimum as possible the loss, so different method is applied for this survey. The survey activity is started with Data analysis. After risk survey, the report will be established. The report will contain with the data analysis, result of actual site survey, recommendation and the next program.
