

Loss Prevention Survey (Fire Risk)

Loss Prevention Survey is useful tool to understand the risk of premises and to provide the suggested improvement which refers to the best practice in industry without forgetting the actual condition of premises. The Loss Prevention Survey assesses several perils such as fire, explosion, natural peril, security, riot, strike, machinery breakdown, business interruption etc but mostly we are concerned on fire and explosion perils. One of reasons why fire and explosion become a main concern is severe loss from this peril and the cause of it can be controlled become minimum.
